Announcing Publication of

A Methodology for Social Research

GIDEON SJOBERG • ROGER NETT

This original work aims to place research procedures in a theoretical context and to work out a methodology for research in the social sciences. It elaborates upon the implications of the proposition that the scientist is a variable in the research design and illuminates the key areas of controversy regarding the application of research tools. The researcher is also seen as a variable in the course of the research. The book examines the nature of theory and theory construction and demonstrates that certain kinds of research procedures are far more compatible with particular kinds of theoretical systems than with others. Stresses the fact that science is a social enterprise and that research procedures are social norms. Examines the research process from a sociology-of-knowledge perspective, clarifying and objectifying a wide variety of research procedures, with special attention to the ideal vs. the actual norms. Analyzes in a methodological context the question of ethics in scientific investigation. Considers the selection of the research problem and the diffusion of findings as basic methodological issues. *Ready August 30. 355 pages. \$9.95*

Sociological Analysis

An Empirical Approach Through Replication

MURRAY A. STRAUS • JOEL I. NELSON

This unique, field-tested manual provides 22 outstanding, original, and un-abridged research reports, with step-by-step directions for replicating the essentials of these reports. Thus, the beginning student reads original research and demonstrates for himself the empirical basis for the researchers' conclusions; at the same time, he is given a feeling and appreciation for the elementary methods of sociological research. Requiring no prior training in sociology, research methods, or statistics, the problems can each be completed within a two-hour laboratory session or as outside assignments. Most topics covered in introductory courses are included. A wide variety of methods is employed in addition to the survey questionnaire—small-groups data, content analysis, participant observation, and use of library documents. *355 pages. Paper. \$4.95*
